WORKFORCE TRAINING

A round-up of technical workforce training opportunities in facilities near the Park

Nearby facilities produce skilled workers

Satsop Development Park AVAILABLE TRAINING

Companies relying on technically trained human capital which locate at Satsop Development Park may be able to access a number of workforce training incentives. Training support is also widely available locally.

Subsidies are available for on-the-job or customized training for new companies locating in Grays Harbor. Local schools, colleges, and community-based service providers can design customized training that meet each employer's unique needs.

Training incentives include up to 70 percent of actual training costs through the Workforce Training and Education Coordinating Board and the Workforce Development Council. Training materials, space, overhead and trainer salaries may be covered.

For qualified employees, 100 percent of on-the-job training costs and up to 50 percent of training wages and pre-employment training costs may be obtained.

An ongoing pool of skilled workers, and educational facilities to provide these skills, are vital to new and expanding companies. Satsop Development Park is located near a number of facilities which provide specialized and general technology training. Grays Harbor College offers degree and/or certificate training programs. In Tacoma, the Institute of Technology, a branch of the University of Washington Tacoma, meets the growing demand for educated tech workers with its established computer science program.
